QUICKSET GRIPPERS
MODEL "B"

The Model "B" Quickset Gripper is a cam operated assembly designed specifically for the welding industry. The gripper incorporates many features that make it especially suitable for the welding environment. These features include single point cam operation of the jaws and adjustable quick-change reversible jaws that can be positioned for small and large diameter workpieces. Heavy duty construction and a completely enclosed face plate prevents flux and weld splatter from impairing the operation of the gripper.

Holding Capacity (outside clamping) Diameter .......................................................... 1-1/2" to 40-3/4"
Holding Capacity (inside clamping) Diameter .............................................................. 5-1/2" to 44-3/8"
Gripper Jaws .................................................................................................................. (3) Self-Centering
Gripper Jaw Adjustment ............................................................................................. Single Point Screw / Ball Lock Pin
Gripper Adj. Force (max. allowable) ........................................................................... 1380 in-lb (69 lb. on 20" handle)
Jaws Attachment .......................................................................................................... Reversible, Quickset Ball Lock Pin
Mounting Holes ............................................................................................................ (3) for 5/8" Socket Head Cap Screws on 19-1/4" B.C.D.
Weight ............................................................................................................................... 350 lb.

Optional Accessories:

For Mounting Gripper to Positioner
